

## Math/Science Seminar Quarter Review

ANSWER THESE QUESTIONS ON A SEPARATE PIECE OF PAPER TO PREPARE FOR YOUR FINAL QUARTER EXAM.

1. What is STEM? **Science technology engineering and mathematics**
2. What are some STEM careers? **Ex. Biomedical engineer; civil engineer; microbiologist; doctor**
3. Why is mathematics important for science? **Mathematics is applied in science**
4. Explain the steps of the engineering design process (EDP): **identify the problem, research the problem, develop possible solutions, select the best solution, construct a prototype, test and evaluate, communicate and REDESIGN**
5. Compare/contrast the EDP to the scientific method:

The Scientific Method	The Engineering Design Process
State your question	Define the problem
Do background research	Do background research
Formulate your hypothesis, identify variables	Specify requirements
Design experiment, establish procedure	Create alternative solutions, choose the best one and develop it
Test your hypothesis by doing an experiment	Build a prototype
Analyze your results and draw conclusions	Test and redesign as necessary
Communicate results	Communicate results
Steps of The Scientific Method	Steps of The Engineering Design Process

6. How does the design process begin? **Defining the problem or need**
7. What do you think is the difference between an engineer and a technician? **a technician is a person employed to look after technical equipment or do practical work in a laboratory whereas an engineer is designing the process or equipment**
8. What are some constraints engineers usually have to consider? **Time, money, materials**
9. What are examples of some criteria engineers have to consider? **Market, needs and desires ie. Ecofriendly, built out of recyclable material, cost**
10. How do you calculate material cost? **See your worksheets from class**
11. How do you calculate labor cost? **See your worksheets from class**
12. How do you calculate overhead cost? **See your worksheets from class**
13. What are some other factors that go into determining the cost of a product? **See your worksheets from class**
14. What factors can engineers consider when trying to limit cost? **Reduce waste of material or material used, design so that a lot can easily fit in the packaging box to reduce shipping cost**
15. What is the “least count” on a measuring device? Give an example: **smallest marking on the device in the unit you are measuring in (ex. Tenth of a cm or 1mm)**
16. Can you convert the following using the method we learned in class?
 

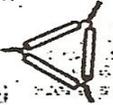

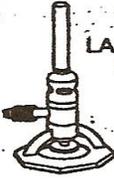

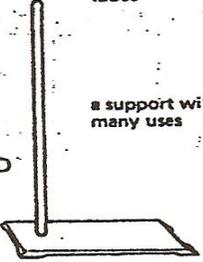

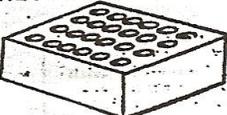

a. Feet to inches	d. Seconds to years
b. Meters to km	e. Miles to meters
c. Km to m	f. M to cm
17. What are the rules for significant figures?  
**You don't have to memorize these. The rules will be given to you on the test, but you do need to be able to use them.**
18. How many significant figures do the following have?

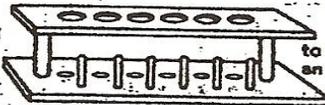

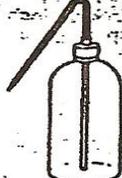

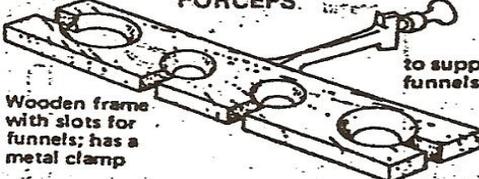

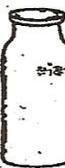

- a. 1232 4
- b. 1009380 6
- c. .00890 3
- d. 0.09 1
- e. 101 3

- f. 10.001 5
- g. 90.0900 6
- h. 0.00000001 1
- i. 0.900005

19. Neon gas makes up 0.0018% by volume of the air around us. How many significant figures are being given in this percentage? 2
20. Can you identify all the pieces of lab equipment by what they look like? See pictures below:

**APPARATUS LIST FOR STUDENT USE**

DESCRIPTION	APPARATUS	USE	DESCRIPTION	APPARATUS	USE
glass common sizes 100 mL 250 mL 400 mL marked on the beaker		as a container, like a cup may be heated	10 centimeter (cm) ruler, plastic divided into centimeter and millimeter (mm) divisions		to measure length
glass marked with a milliliter (mL) scale size divisions 50 mL 1.0 mL 35 mL 0.2 or 0.5 mL 10 mL 0.1 mL		to measure volume	triangular wire frame with clay material coverings		to support the crucible
glass common sizes 125 mL 250 mL 500 mL marked on the flask	 	may be heated	small porcelain dish with cover		to heat small amounts of solid material at high temperature
glass several sizes		many uses can be heated	hardened ceramic-fibered material		to place under hot apparatus
metal clamp with a spring handle		to hold a test tube	wire screen with ceramic-fibered center		to spread the heat of a flame
metal		to pick up and hold apparatus	metal heating device connected to gas outlet with rubber tubing		to heat chemicals in beakers or test tubes
glass marked with a milliliter (mL) scale		used to collect and measure the volumes of gases	metal rod upright heavy base		a support with many uses
metal clamp with flexible clips		to hold burets when titrating	glass marked with a milliliter (mL) scale and fitted with a stopcock, pinch clamp, or glass bead		used to withdraw and measure volumes of solutions in titrations
			glass marked off to liter capacity, with a glass stopper		used in the preparation of solutions
			plastic		used to hold liquids in micro experiment

DESCRIPTION	APPARATUS	USE	DESCRIPTION	APPARATUS	USE
iron ring with screw fastener several sizes	 IRON RING	to fasten to the ring stand as a support for apparatus	brush with wire handle	 TEST TUBE BRUSH	to scrub glass apparatus
metal clamp with 1. screw fastener 2. swivel and lock nut 3. adjusting screw 4. curved clamp	 BURET CLAMP- TEST TUBE CLAMP	to hold apparatus may be fastened to the ring stand	glass rod	 STIRRING ROD	to stir combinations of materials to use in pouring liquids
heavy porcelain dish with grinder	 MORTAR AND PESTLE	to grind chemicals to a powder	porcelain dish	 EVAPORATING DISH	as a container for small amounts of liquid being evaporated
may be of metal or porcelain	 SPATULA	to transfer solid chemicals in weighing	thick glass	 GLASS PLATE	many uses (shou'd not be heated)
metal file with three cutting edges	 TRIANGULAR FILE	to scratch glass to file	curved glass	 WATCH GLASS	may be used as a beaker cover may be used in evaporating very small amounts of liquid
short length of rubber tubing	 RUBBER CONNECTOR	to connect parts of apparatus	glass or plastic	 FUNNEL	to hold a filter paper. may be used in pouring
metal clamp with finger grips	 PINCH CLAMP	to clamp a rubber connector	glass tip with rubber bulb	 MEDICINE DROPPER	to transfer small amounts of liquid
rack; may be wood, metal or plastic	 TEST TUBE RACK	to hold test tubes in an upright position	metal	 FORCEPS	to pick up or hold small objects
squeezable plastic bottle with angular tip	 PLASTIC WASH BOTTLE	to dispense distilled water	Wooden frame with slots for funnels; has a metal clamp	 FUNNEL SUPPORT	to support funnels
galvanized iron container with rolled edge, overflow tube, and bottle shelf	 PNEUMATIC TROUGH	to hold water, gas collecting bottles, and delivery tube from gas generator	glass	 WIDE-MOUTH BOTTLE	many uses as a container
				 THIN STEM PIPETTE	plastic used in micro experiment to transfer small amounts of liquid

- Can you identify the function of all the equipment used in the lab? **see above**
- Are you able to look at a measuring device and determine how to take a precise measurement?
- When taking measurements, how do you know what digit to round to? **You round one digit beyond the least count on a measuring device. Example: if a ruler has a tenth of a cm, you will round to 0.001 cm when recording your answers**
- What is scientific notation? **Shorthand way of writing really large or small numbers**

25. Can you write the following in scientific notation?

- a. 1000000000  $1 \times 10^9$
- b. 90900000  $9.09 \times 10^7$
- c. 0.000023  $2.3 \times 10^{-5}$
- d. 0.0000023200  $2.32 \times 10^{-6}$

26. If the speed of light through glass is quoted as  $2 \times 10^8$  meters per second, what is the speed of light in its conventional form? (not scientific method) **200000000 meters per second**

27. What is a ratio? **quantitative relation between two amounts showing the number of times one value contains or is contained within the other.**

28. Write and resolve one of the word problems from your ratio worksheet: **do not need to do**

29. How do you calculate percent error? **expresses as a percentage the difference between an approximate or measured value and an exact or known value;  $|\text{accepted value} - \text{experimental value}| \div \text{accepted value} \times 100\%$**

30. You are an employee of Welch's Juice are testing to see how much sugar is in grape juice. After performing the experiment you determine that there is 7 grams of sugar in one serving of juice, but there is supposed to be only 2 grams of sugar (theoretical yield) in a serving. What is the percent error in the experiment?

$$2-7/2 \times 100 = 250\%$$

31. How do you determine precision? **Using a percent difference equation**

32. How do you determine accuracy? **Percent error formula**

33. Jack, John and Jake all attempt to measure how tall Joe is. Jack measures Joe to be 6.2 ft tall, John thinks Joe is 6.0 ft tall and Jake also thinks Joe is 6.4ft tall. Were the girls relatively precise in their measurements?

$$\text{percent difference} = \left( \frac{\text{Largest Value} - \text{Smallest Value}}{\text{Average Value}} \right)$$

$$6.4-6.0/6.2 \times 100 = 6.45\%$$

34. If Joe is really 6.4ft tall, was the group as a whole accurate?

$$\text{Percent Error} = 100 \times \frac{(\text{Experimental value} - \text{Standard value})}{\text{Standard value}}$$

$$6.2-6.4/6.4 \times 100 = 3.12\%$$

35. Can you be precise but not accurate? **Yes, if all your measurements are similar but are not close to the theoretical or actual value.**

36. What measuring device would you use to measure precise amounts of liquid? **A graduated cylinder or pipette**

37. Is a beaker a good device to use when taking liquid measurements?

**No, a beaker is not precise**

38. What digit would you round to when taking a measurement using a beaker?

**Beakers usually go up by 50's so you could round to the one's place**

39. Fill in the spaces to the left of the Design Processes List. Number them in order from one to eight. **See number 5 above**

- \_\_\_\_\_ Make a Prototype
- \_\_\_\_\_ Define the Problem
- \_\_\_\_\_ Communicate
- \_\_\_\_\_ Choose the Best Solution
- \_\_\_\_\_ Develop Possible Solutions
- \_\_\_\_\_ Test and Evaluate
- \_\_\_\_\_ Research the Problem
- \_\_\_\_\_ Redesign

40. Think about how an engineer goes about solving a problem. Explain below: **See number 5 above**
